

TP 6: Modular Exponentiation

Jean-Sébastien Coron

Université du Luxembourg

1 Modular Exponentiation

Write a program `expmod` that implements the modular exponentiation algorithm from the course.

```
$ expmod 2342 6762 9343  
7147
```

because $2342^{6762} \equiv 7147 \pmod{9343}$.
